4Points Technologies becomes TNT Partner delivering Identity, Security & Compliance Solutions

Campbell, CA, March 10, 2006 - *4Points Technologies*, a premier provider of professional IT services and solutions, is pleased to announce it has recently become an official Reseller/Integrator of Trusted Network Technologies' Identity product and solutions.

4Points' Identity experts deliver comprehensive Identity-based services and solutions combined with a deep understanding of Identity Management technologies, Security and Network Access issues. Identity Management solutions help to control and define the way users see and access information and how it is secured and organized throughout the enterprise.

"Adding the TNT Identity product to our service offering allows us to deliver identity management solutions to a larger base. We believe TNT will allow us to take identity management to the next level and we look forward to great opportunities collaborating with TNT." said Paul Bertucci, CTO advisor of 4Points Technologies.

About 4Point Technologies

4Points Technologies is focused on providing services and solutions for the new emerging economies and converging technologies. The core strength of 4Points is its worldwide network of highly skilled professional consulting experts and strategic alliances with leading technology partners. 4Points professionals combine a deep understanding of new technology issues with a proven track record of cost effective and on-time delivery while maintaining the highest quality standards. 4Points' expertise and resources are focused on providing high quality services and solutions in database design, performance and tuning, Identity, LDAP directories, data integration and supply chain management for industries that include financial, technology, manufacturing, telecom and government sectors.

About TNT

Trusted Network Technologies provides identity audit and access control solutions that establish pervasive identity, letting companies see, control and prove who's interacting with any server or application, from what computer, and when. With brilliant simplicity, low cost and fast deployment, TNT allows companies to automate identity auditing and control as a fundamental business function, simultaneously strengthening and simplifying identity management and enforcement. Universities, banks, utilities, government agencies, Fortune 1000 companies and others rely on TNT solutions to prevent the debilitating exposure of confidential information, save millions complying with Sarbanes-Oxley and other regulations, and extend new services to partners and customers that drive revenue and profitability.
